Optimus

Keeping hot food hot and cold food cold simultaneously can be a challenge, especially in smaller spaces without the proper equipment.

The Optimus cart is a compact solution that offers both heating and refrigeration in a small footprint. Ideal for facilities providing bed service and room service, the Optimus cart features a single-cabinet system that accommodates both needs.

OPTIMAL TEMPERATURES

Improving patient satisfaction with food by reducing temperature complaints is key. Our system ensures that low-density foods like eggs stay warm, while items like salads and fruit cups remain crisp. Whether serving late trays, covering long distances, or handling large volumes of meals, you can count on Optimus to maintain the proper temperatures.

MANEUVERABILITY

Our compact design offers a capacity of up to 24 meals within a 56" tall frame and weighs under 430 lbs. With a low profile, you can easily see over the top while pushing down the hall. The six-caster configuration enables the cart to turn on its own axis, and premium casters ensure quiet maneuverability.

SIMPLICITY

This one-tray system offers hot and cold temperature control in a single unit. It uses standard 120V power and includes removable racks for easy cleaning. The hotel-style dinnerware provides excellent presentation, while touchpad controls offer preset temperatures and reliable performance.
